

HTML Answers

1. HTML (HyperText Markup Language) is used to create the structure of web pages using elements like headings, paragraphs, links, and images.
2. Block-level elements take full width and start on a new line, while inline elements take only necessary width and do not start on a new line.
3. The `<form>` tag is used to collect user input and send it to a server for processing.
4. `<div>` is a block-level element used for layout, while `<span>` is an inline element used for styling small parts of text.
5. Semantic HTML elements are tags that clearly describe their meaning, such as `<header>`, `<section>`, and `<footer>`, improving readability and SEO.
